

TURN IT OFF & ON AGAIN

Dave Goulds game idea

The theme of this game is suited to our potential future employers in tech industry, while also not being a common & overused theme.

Two main gameplay scenes, with invisible but clickable buttons on the items that seem logical. maybe with a pop up showing its a button.

3 main characters, plus extra characters if we have time which will be each of us participating in the game jam.

The game revolves around a simulation of the day of an IT repair guy/gal/alien lol.

Each day you will start the day at 9am where you check the stock and make any parts orders you think you will need at a cost of each item.

You will then move into the days work where you will be greeted by a set amount of job that will take an amount of clicks to finish, with each click the clock will advance 15m(for example) at the end of the day at 5pm you can fail jobs if not complete or do overtime, if you do overtime you will take a negative mood buff, and have less time for the stage where you can recover which will be 5pm-10pm with tasks taking an X amount of time each and giving certain buffs to the elements people are managing.

The aim of the game is to get as much done and keep healthy mentally and physically. on delivery of parts each day even if you don't order anything you will still get the delivery in a letter form of the tech editor news letter, this will be a loot box add-on to the delivery box, where you will have x chance to get free component, or free cosmetic mods for the room like little characters and such, you will get a chance to get free training tickets, and also a chance to get key items that will allow certain buffs for the start of each new gameplay this will keep the game dynamic and replayable.

Game Mechanics

Very simple list based stocking system(no movement no physical interaction).

Scene changes between 3 main scenes.

Stats for health factors to be decided including mental and physical.

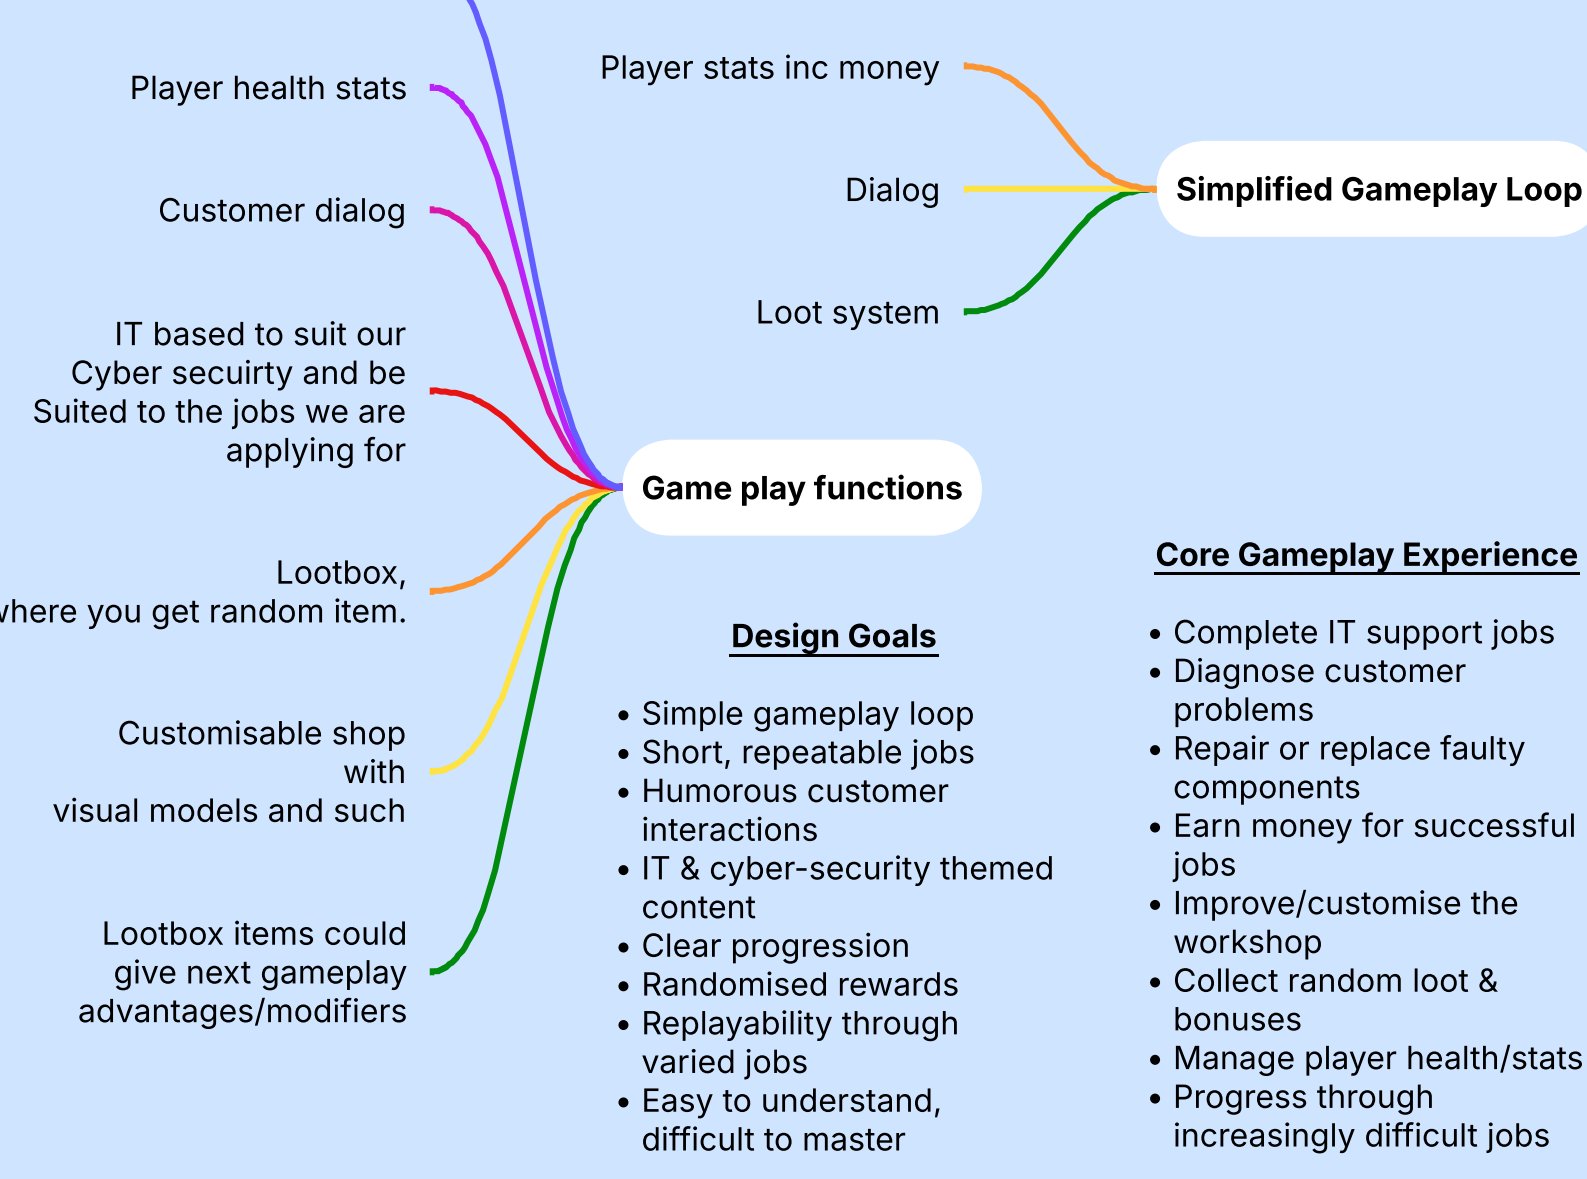

Track of tickets for free courses.

Tracking of the save state so the player can return.

Tracking of variables of what the player has.

Mapping out items on a visible scene where the player can add models and such which are the free gifts from the loot box.

There are more but thats the key on the model.

Achievements/Collectables

Example art

Canvas pop up showing them in a shelf. In the home scene.

Also display them in the achievements page Lester Membe is building.

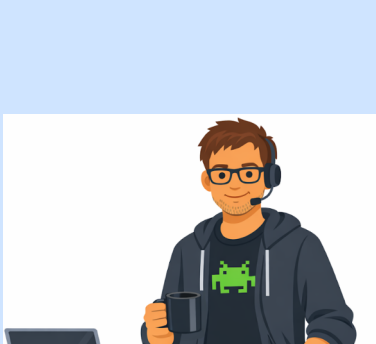

Characters

Name: Male 1

Name: Female

Name: Male 2

Achievements List

- 1) Toy/gaming laser gun
- 2) Floppy disk
- 3) Gaming joystick
- 4) Old Phone
- 5) Rubix cube
- 6) Drinking bird toy
- 7) Boombox & Cassette
- 8) Digital pet game/toy
- 9) Gaming controller
- 10) Lava Lamp
- 11) VHS
- 12) Books
- 13) Spilled glass
- 14) Off & On Again
