	Power Spike	Not Enough Power	Water Damage	Loose Components	Overclocked	Animals	Faulty Components	Old Components	Falling Damage	Knocking Damage
GPU	Nothing is coming through on the GPU, the LED's don't even come on, looks like no power is getting to it anymore. Gwam Blah	The GPU is not getting anypower, thus, does not function. Gwam Blah	Water got into the seating for of the GPU and short circuited the component Gwam Blah	The GPU was installed incorrectly, causing it to misalign with the connectors. Gwam Blah	The GPU has been damaged from the overclock, running worse than factory settings Gwam Blah	Fur got into the GPU, availng the fans to be blocked and causing overheating problems Gwam Blah	Faulty GPU caused issues with the display on the monitors Gwam Blah	You could probably still run DOOM on this GPU, but you might struggle with Age of Empires Gwam Blah	GPU was damaged when the machine was dropped, causing it to become unresponsive Gwam Blah	the GPU has been rattled by the knock and is now showing errors Gwam Blah
	Garrick Hilton	Gwam Blah	Liquid got into the component itself and fried the circuitry. Gwam Blah	Gwam Blah	Gwam Blah	Gwam Blah	Gwam Blah	The GPU is no longer supported by any new software and needs to be retired. Gwam Blah	Gwam Blah	Due to the knock the computer is freezing and the GPU is causing stutters Gwam Blah
	Gwam Blah	Gwam Blah	Gwam Blah	Gwam Blah	Gwam Blah	Gwam Blah	Gwam Blah	Gwam Blah	Gwam Blah	Gwam Blah

	Power Spike	Not enough power	Water damage	Loose components	Overclocked	Animals	faulty component	Old component	Falling damage	Knocking damage
PSU	Turned the computer on like normal and there was a pop and it smelled like burning. Gwam Blah	It's not producing enough power to supply the PC and peripherals and needs to be replaced Gwam Blah	Water got into the PSU and it didn't mix very well with electricity. Gwam Blah	Improper connections in the PSU caused issues with the power supply to the machine. Gwam Blah	Overclocking a PSU? what else did they think would happen... Gwam Blah	The humans pet was messing with the PSU and caused it to short circuit. Gwam Blah	A faulty PSU caused components to not receive the right amount of power Gwam Blah	It should be a crime to be running a PSU this old. Gwam Blah	The power supply was damaged during the fall, Gwam Blah	The power supply has taken a knock and needs some repairs. Gwam Blah
	Computer was running like normla when everything shut off randomly, when I turn it back on I get a blank screen. Gwam Blah	Gwam Blah	Gwam Blah	Improperinstallation caused sparks and short curcuited the system. Gwam Blah	Garrick Hilton	Gwam Blah	Gwam Blah	Due to the age of the parts the PSU is unsafe to use. Gwam Blah	Garrick Hilton	Garrick Hilton
	Garrick Hilton	Garrick Hilton	Garrick Hilton	Garrick Hilton	Garrick Hilton	Garrick Hilton	Garrick Hilton	Garrick Hilton	Garrick Hilton	Garrick Hilton

	Power Spike	Not enough power	Water damage	Loose components	Overclocked	Animals	faulty component	Old component	Falling damage	Knocking damage
Mother board	Motherboard has visible burn marks around some of components, looks like it will need replacing. Gwam Blah	There is not enough power to initialize the motherboard, nevermind anything else. Gwam Blah	Water got into the machine through the top cooling vents..this probably what did it Gwam Blah	Motherboard wasn't connected to the tower correctly, causing it to come loose. Gwam Blah	Due to being overclocked the motherboard has taken significant damage Gwam Blah	Animal fur got into the motherboard, causing issues with connections and overheating Gwam Blah	Faulty motherboard caused components to be unresponsive Gwam Blah	the motherboard is too old to take any newer upgrades and needs to be upgraded itself Gwam Blah	Motherboard was damaged due to a fall and impacting the ground Gwam Blah	Due to the case being knocked some components have come loose from the motherboard Gwam Blah
	There's power to the machine after the spike still, but nothing is getting through the motherboard. Gwam Blah	Gwam Blah	fluid spilled against the motherboard and damaged some components Gwam Blah	Motherboard was not connected correctly, causing damage to other components Gwam Blah	Gwam Blah	Gwam Blah	Gwam Blah	Having seen it's end of days the motherboard is no longer with us. Gwam Blah	Gwam Blah	Gwam Blah

	Power Spike	Not enough power	Water damage	Loose components	Overclocked	Animals	faulty component	Old component	Falling damage	Knocking damage
CPU	Nothing is getting to the CPU, the powerspike probably fried the connection Gwam Blah	Nothing is getting through to the CPU, is most likely a power issue Gwam Blah	Liquid collected around the cooling stack and damaged the CPU Gwam Blah	CPU was not installed correctly, causing multiple problems Gwam Blah	The CPU has overheated due to the overclocking and is no longer responds Gwam Blah	Fur got stuck in the CPU housing, causing heat damage to the components Gwam Blah	Fault with the CPU caused problems when operating the machine Gwam Blah	This CPU was at least 5 years out of date 5 years ago and has failed Gwam Blah	CPU became faulty after the impact after the machine was dropped Gwam Blah	The CPU housing has been knocked loose and has caused damage to the CPU Gwam Blah
	Garrick Hilton	Gwam Blah	Water damage caused a short circuit in the connectors of the CPU Gwam Blah	The CPU housing was loose, causing damage to the component Gwam Blah	Gwam Blah	Gwam Blah	Gwam Blah	Due to the age of the CPU performance has been severely impacted Gwam Blah	Gwam Blah	Gwam Blah
	Garrick Hilton	Garrick Hilton	Garrick Hilton	Garrick Hilton	Garrick Hilton	Garrick Hilton	Garrick Hilton	Garrick Hilton	Garrick Hilton	Garrick Hilton

	Power Spike	Not enough power	Water damage	Loose components	Overclocked	Animals	faulty component	Old component	Falling damage	Knocking damage
RAM	There is visible burn marks around the RAM connectors and the BIOS fails to initialize Gwam Blah	Inadequate power supply has left the RAM wanting. Gwam Blah	Gwam Blah	RAM was not seated correctly intoit's housing, causing it to be unreadable Gwam Blah	RAM has taken too much voltage and is now unresponsive on boot Gwam Blah	I'm not sure how this happened, but fur is interfereing with the RAM connections Gwam Blah	Faulty RAM impacted the performance of the machine. Gwam Blah	I don't know how old this RAM is, but I think I saw some on the antiques roadshow Gwam Blah	the RAM received falling damage, becoming unfunctionional Gwam Blah	The RAM has been knocked loose from it's housing. Gwam Blah
	Garrick Hilton	Gwam Blah	Gwam Blah	Unseated RAM caused the computer to be unable to even boot up, giving three beeps. Gwam Blah	Gwam Blah	Gwam Blah	Gwam Blah	The RAM is too old to function with the current software on the PC Gwam Blah	Gwam Blah	Gwam Blah

Diagnostics	COMMON PROBLEMS Garrick Hilton	SLOW Wi-FI Garrick Hilton	Computer keeps turning off and overheating (too many tabs open) Garrick Hilton	Overheating and turning off (laptop on a cushion) Garrick Hilton	Printer not responding Garrick Hilton	Display keeps flickering Garrick Hilton	Harddrive failure Garrick Hilton	Corrupted files Garrick Hilton	Virus/Malware infection Garrick Hilton	
	UNCOMMON PROBLEMS Garrick Hilton	Hardware not recognised (loose internal components) Garrick Hilton	Corrupted user profile, cannot log in or use desktop Garrick Hilton	Registry errors causing crashes and slow performance Garrick Hilton	Time and date resetting, CMOS battery failure Garrick Hilton	Can't connect bluetooth device, disconnects frequently Garrick Hilton	Can't reach any website, DNS problems Garrick Hilton	Unresponsive USB ports, need to reboot Garrick Hilton	Cursor moving and clicks without user input Garrick Hilton	
Off & On Again	JOKE PROBLEMS Garrick Hilton	Help my computer is now only in Korean Garrick Hilton	Wanted water cooling, turned computer case into fishtank, fish biting cables Garrick Hilton	Spilled soup on their keyboard now they can only type in emojis Garrick Hilton	User used too big of a fan and now complains of loud noises Garrick Hilton	Tried to burn a disc by putting laptop in the oven Garrick Hilton	User has a distracting background and complains about it Garrick Hilton	Using a laser mouse on a glass table Garrick Hilton	Whenever they use the r key it always types a w instead. Garrick Hilton	

	Virus	Worm	Trojan	Ransomware	spyware	Adware	Keylogger	Phishing	Botnet Malware	Crpytominer
	There has been damage to the system due to a viral malware infection in the systems files Garrick Hilton	A worm was discovered in the files during a virus scan, customer has been advised to check other computers on the network Garrick Hilton	Due to installing a program from a dodgy website the user had run a trojan on their system and caused an infection Garrick Hilton	They were locked out of their system and had their entire system encrypted, we had to install from backup. Garrick Hilton	the user had inadvertently installed spyware, it has been collecting data from them for a while now. Garrick Hilton	Users screen was completely full of adverts, it was safer to put the machine down with a reformat than try and run a scan Garrick Hilton	There was a keylogger found on the users PC, it had been logging everything that had been typed on the machine Garrick Hilton	the user had clicked n a link which had compromised their systems integrity, we have fixed the issue now. Garrick Hilton	User complained of their machine running slow, it was found to have a botnet installed on it running in the background. Garrick Hilton	After installing new software the user saw their CPU usage spike weirdly, it was found to be secretly harbouring a cryptominer. Garrick Hilton
				They were locked out of their system and had their entire system encrypted, we had to do a complete reformatting, it was that or pay the hackers Garrick Hilton	the user had inadvertently installed spyware, it has been collecting data from them for a while now. We had to uninstall Murfee Garrick Hilton	User complained about ranom pop-ups on their screen, we found adware through a virus scan Garrick Hilton
